China's Largest Solar Cell Production Base to Open In Baoding

BEIJING - Construction of China's largest polycrystalline silicon solar cell production base is well under way at the State High-Tech Development Zone in Baoding City, Hebei Province.

Estimated to cost 157 million yuan (US\$18.98 million), the project will form an annual production capacity of 3-megawatt polycrystalline silicon solar cells after it goes into production in one year.
